

Indestructible

specialist coatings manufacture

Colour Guide

This colour guide features the most popular colours produced for our clients from the wide and varying colour systems used throughout the world.

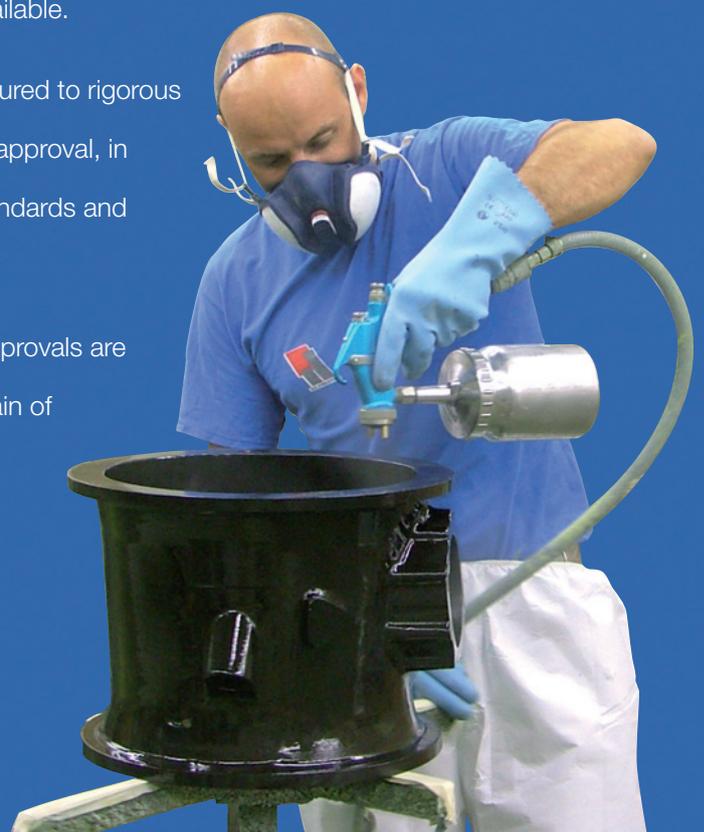

In addition to the colours illustrated we are able to match the majority of colours featured in the full range of worldwide colour cards including BS.381C; BS.4800; RAL; AFNOR; Federal Standard and NCIS. In addition, we can manufacture close matches to Pantone colours. It should be borne in mind that Pantone inks are usually brighter in colour than can be achieved with paints.

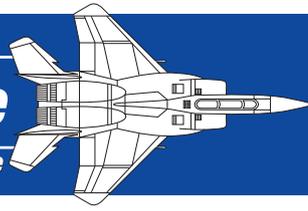

The colours illustrated are typically available in a wide range of products. These include the Rockhard range of baking epoxy finishes; low VOC 2 pack cold cure epoxy finishes; low VOC 2 pack cold cure polyurethane finishes and specialised aircraft finishes. The majority of colours are available in gloss, semi-gloss, semi-matt and matt finishes.

In addition to the finish colours illustrated, a full range of compatible primers, both chrome free and chrome containing are available.

All Indestructible products are manufactured to rigorous quality standards, in line with our AS.9100 approval, in addition to the many international client standards and specifications held.

Full details on all product ranges and approvals are available from our UK office or from our chain of worldwide distributors.

BS381C Range of Colours

381C:693
Aircraft Grey
