Thermochromic Paints - Non-Reversible

Thermochromic paints are designed to change colour at specific temperatures giving a visual indication of a temperature change. This can be used for activities such as safety indicators on thermally sensitive systems, indication of the thermal history or R&D components, over temperature safety indicators in the petrochemical industry, etc. These paints function by the action of chemical change within solid components of the coating.

The colour change is **non-reversible** within this range. The paints are designed to be thermally stable when used below their first temperature change level. When the coatings approach their first colour change the reaction will occur quickly at the specified temperature or gradually if the paint is held within a few tens of degrees of the change temperature.

Examples of the visual colour changes exhibited by our Non-Reversible Thermochromic Paint Range, in response to temperature rise.

Once subject to heating, paints will permanently change colour. Heated within 10 minutes to temperature shown or above. Changes may occur at lower temperatures if heated over long periods.

Temperatures shown in degrees centigrade. For demonstrative purposes only, colours may vary.

Paints Available In The Range											
Product Code	Colour Change Temperature Degrees Centigrade (°C)				Initial Colour	Product Code	Colour Change Temperature Degrees Centigrade (°C)				Initial Colour
CT-80	80	240	295		Beige	CT-IP180	180	310			Dark Blue
CT-115-Rev1	115	145	300	330	Pink	CT-225	225	235	285		Deep Yellow
CT-140	140	316	360		Pink	CT-400	400	520	560		Purple
CT-150	150	240	310		Yellow	CT-410	410	440	560		Blue

CT-165-R1	165	180	205		White	CT-8590XI	Thinner For CT Non-Reversible Colour Range				

Thermochromic Paints - Reversible

A range of coloured, lower temperature, reversible thermal indicating paints.

CT-IPR Range: Paints are coloured when below the stated temperature, changing to clear or a lighter colour above the relevant temperature.

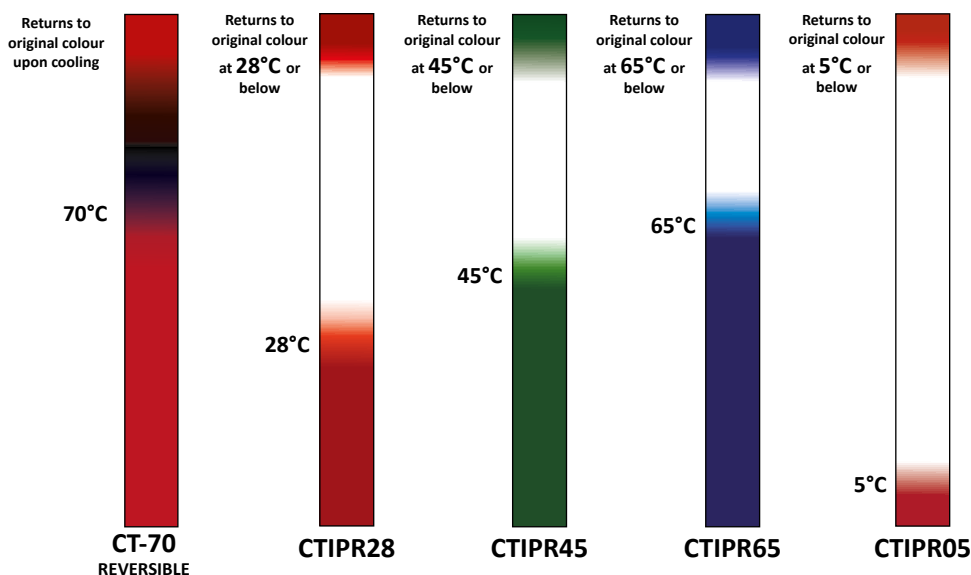

The colour starts to fade from about 4°C below the change activation temperature.

The original colour will return as temperature drops below the activation temperature

Examples of the visual colour changes exhibited by our Reversible Thermochromic Paint, in response to temperature rise.

Once subject to heating, paints will change to colour indicated and revert back to original colour upon cooling.

Heated within 10 minutes to temperature shown or above. Changes may occur at lower temperatures if heated over long periods.

Temperatures shown in degrees centigrade.
For demonstrative purposes only, colours may vary.

Paints Available In The Range		
Product Code	Colour Change Temperature Degrees Centigrade (°C)	Initial Colour
CT-70	70	Red
CT-IPR28	28	Rose Red
CT-IPR45	45	Green
CT-IPR65	65	Deep Blue
CT-IPR05	05	Thermo Red

Thermochromic Ink - Non-Reversible

Irreversible Thermal Indicating Ink

A water-based thermochromic coating to permanently indicate temperature change at lower temperatures.

- Designed for simple use via printing
- Clear colour contrast for instant visual indication of temperature change
- Permanent record of when temperature has been exceeded
- Appropriate for use as a security measure

A semi-transparent off white/pink water based coating, produced from organic encapsulated thermochromic pigments. This material is specially designed to be printed and over lacquered, if used. Changes from light pink to red irreversibly at temperatures indicated.

Initial starting colour
(ambient temperature)

Permanent colour change at
temperatures between 55-60°C

Colour Change

Ambient Temperature

55-60 °C

Also available in the Colour Therm Range

- Solvents, Cleaners and Thinners for the individual paints.
- Anti-corrosive primers for use, for example, to protect steel structures.
- Clear over lacquers for some products, as UV resistance is not yet a qualified resistance.

Refinery Products - CT-IP180

A functional coating for identification of hot spots and internal insulation failures. Exhibiting a visual colour change in response to temperature rise.

Typically used on reaction vessels on chemical and petrochemical sites as a one-time warning of dangerous temperature increases.

This product can be used in two coats as a self-priming system over stainless steel, or over an inorganic zinc primer for optimum corrosion protection to carbon steel substrates. Suitable for application both in the fabrication yard and on-site.

Irreversible Thermochromic Paint

- Simple method of measuring temperature with a single paint pack
- Non-reversible, accurate method of measuring temperature
- Invaluable tool in thermal measurement to indicate dangerous temperature increases
- Strong and clear colour contrast
- Multi change paint indicates more than one temperature rise

Colour change from dark blue to blue at temperatures between 180-220°C (356-428°F), and from blue to white at temperatures between 310-350°C (590-662°F).

Ideal For Refinery Use

CT-IP180 is a one time warning system. The colour change is permanent.

After warning of a temperature change the coating must be reapplied after proper surface preparation has been performed

Example of colour change on reaction vessel. For demonstrative purposes only, colours may vary.

Surface Temperature Monitoring System

Irreversible Labels

A fast, simple temperature monitoring system based on Proprietary colour change technology

- Inexpensive and easy to use
- Immediate response
- Permanent record of highest temperature
- Oil, water & steam resistant
- Temperature range 40 to 260°C
- Labels or strips
- Silver to black colour change
- Last black event is the highest temperature achieved

Colour Change Thermometry

Digitemp® LC Thermometers
Continuous Temperature Monitoring

A comprehensive system of thermometers based on proprietary Liquid Crystal formulations that change colour at designated temperatures

- Instant Response
- Continuous Readout
- No Batteries or Glass –
- Non Toxic
- Temperature Range - 0 to 100°C (32 to 212°C)
- Accurate +/- 1°C
- Self Adhesive
- Cost Effective

16 Level Thermometer
